

Inteltek Technologies Integrates with TMWSuite

DiamondMine EDI software from Inteltek brings potential savings to TMW Systems customers

Norman, Oklahoma – September 15, 2009 -- Inteltek Technologies Corporation, developers of leading edge web-based EDI and load gathering solutions for the trucking industry, today announced the integration of its DiamondMine EDI translation software with TMWSuite enterprise transportation software from TMW Systems Inc.

The integrated solution enables users of the client/server-based TMWSuite to seamlessly exchange data with the DiamondMine EDI translation software and a shipper's system. The new offering follows Inteltek's highly successful integration between DiamondMine and TMW's TL2000 solution for IBM iSeries or AS/400 platforms.

"We had many TMW customers asking for an integrated solution," said Ron Edwards, president, CEO at Inteltek. "A growing number of shippers mandate that for carriers to receive additional loads they must have EDI capabilities. DiamondMine EDI is a very effective solution that TMWSuite customers can now quickly and inexpensively implement so they can concentrate on moving loads instead of moving EDI data."

DiamondMine EDI translation software provided as a Software-as-a-Service (SaaS) solution is hosted by Inteltek on its IBM iSeries platform. Accessible to users over the Internet, the product allows a carrier to communicate electronically with shippers to transfer loads, shipment status records, invoices and electronic payments using over 6,200 available EDI maps.

"This affordable solution can be quickly implemented, including most maps, at a minimal cost to carriers," Edwards stated. The SaaS offering also eliminates the cost of hardware and software. For our customers using TMWSuite, DiamondMine EDI can let them concentrate on doing what they do best, and can save a company thousands of dollars per year."

About TMW Systems

TMW Systems, Inc., is committed to delivering customer-driven solutions that help companies take better advantage of market opportunities, improve asset productivity and gain a better return on information. TMW's solutions are focused in the private fleet and commercial transportation industries.
